

# THRUST BEARINGS

- Thrust Needle Roller Bearings
- Thrust Roller Bearings

## Structure and Features

IKO Thrust Bearings consist of a precisely made cage and rollers. They have high rigidity and high load capacities and can be used in small spaces.

Thrust Needle Roller Bearings incorporate needle rollers, while Thrust Roller Bearings incorporate cylindrical rollers. Various types of raceway rings are available, and suitable bearings can be selected according to the operating conditions.

When the bearing mounting surfaces of a machine are heat-treated and finished by grinding as raceways, Thrust Bearings can be used without raceway rings allowing the machine to be made more compact. They are most suited to applications where high accuracy is required at high speeds and under fluctuating heavy loads, such as driving mechanisms for automobiles, machine tools, and high-pressure pumps.

### Structures of Thrust Bearings

F

NTB  
AS  
AZK  
WS·GS

## Types

In **IKO** Thrust Bearings, the types shown in Table 1 are available.

**Table 1.1 Type of bearing**

Type	Thrust needle roller bearings	Thrust roller bearings	
		Without inner and outer rings	With inner and outer rings
Model code	NTB	AZK	AZ

**Table 1.2 Type of bearing ring**

Type	Inner ring	Outer ring	Thrust washer
Model code	WS	GS	AS

### Thrust Needle Roller Bearings

These bearings consist of a cage made from a steel plate, which is precisely press formed and surface-hardened, and needle rollers with a diameter variation within  $2\mu\text{m}$ . They have a rigid structure and a high lubricant-retaining capacity.

As they have the lowest sectional height compared with other thrust bearings, they can be used instead of conventional thrust washers and can withstand high-speed rotations with a low coefficient of friction. Specially designed thin inner rings (WS) and outer rings (GS), and especially thin (1 mm thick) thrust washers (AS), are available for use in various applications.

These bearings are generally used by utilizing their inner surface as the guide surface.

### Thrust Roller Bearings

In this series, the caged cylindrical rollers AZK and the complete bearings AZ in which AZK are combined with an inner ring (WS) and an outer ring (GS) are available.

The cage has a special precise structure which is highly rigid, and cylindrical rollers are outwardly arranged and guided by the cage with exact precision to enable them to withstand heavy loads even at high rotational speeds.

Owing to the high accuracy of the bearing height  $T$ , they are suitable for use in machine tools, ultra-high pressure pumps, etc.

These bearings are generally used by utilizing their inner surface as the guide surface.

## Identification Number

The identification number of Thrust Bearings consists of a model code, dimensions and a classification symbol. Some examples are shown below.

**Examples of identification number**

**Example 1 (In case of NTB or AS)**

Model code	Dimensions
NTB	25 42

Type of bearing: NTB  
 Bore diameter (25mm)  
 Outside diameter (42mm)

**Example 2 (In case of AZ or AZK)**

Model code	Dimensions	Classification symbol
AZ	25 42 11	P5

Type of bearing: AZ  
 Bore diameter (25mm)  
 Outside diameter (42mm)  
 Bearing height (11mm)  
 Accuracy class (1) (Class 5)

**Example 3 (In case of WS or GS)**

Model code	Dimensions	Classification symbol
WS	25 42	P5

Type of bearing ring: WS  
 Bore diameter (25mm)  
 Outside diameter (42mm)  
 Accuracy class (Class 5)

Note(1) Not applicable to the model AZK.

## Accuracy

The accuracy of Thrust Bearings is based on JIS B 1514-2, -3:2006 as shown in Table 2.

**Table 2.1 Tolerances**

unit:  $\mu\text{m}$

Type of bearing	Item	Dimension	Dimension symbol	Tolerance
Thrust needle roller bearings	NTB	Bore diameter	$d$	E11
		Outside diameter	$D$	c12
		Width	$D_w$	Equivalent to JIS B 1506 Class 2
Thrust roller bearings	AZK	Bore diameter	$d_c$	As per Table 2.2
		Outside diameter	$D_c$	
		Width	$D_w$	$1 \leq D_w \leq 10$ Equivalent to JIS B 1506 Class 2 $10 < D_w \leq 30$ Equivalent to JIS B 1506 Class 3
	AZ	Height	$T$	As per Table 2.3
Inner rings	WS	Bore diameter	$d$	As per Table 2.4
		Outside diameter	$D$	b12
		Width	$B$	h11
Outer rings	GS	Bore diameter	$d$	B12
		Outside diameter	$D$	As per Table 2.4
		Width	$B$	h11
Thrust washers	AS	Bore diameter	$d$	E12
		Outside diameter	$D$	e12
		Width	$s$	$\pm 50$

3	5.5	
4	6.5	
5	8	

**Fit**

The recommended fits for Thrust Bearings are shown in Table 3.

**Table 3 Recommended fits**

Type of bearing		Tolerance class	
		Shaft	Housing bore
Thrust needle roller bearings	NTB	h8	—
	AZK	h6	—
Thrust roller bearings	AZ		H7
Inner rings	WS	h6	—
Outer rings	GS	—	H7
Thrust washers	AS	h8	—

**Mounting**

When mounting Thrust Bearings, the following items should be considered.

- When inner and outer rings are not used, the hardness of the raceway surfaces should be 58~64HRC, the effective hardening depth should be adequate, and the surface roughness should be less than  $0.2 \mu\text{m} R_a$ .
- When mounting inner and outer rings to shaft and housing bore, dimensions related to mounting should be based on the dimension tables. Also, the mounting surfaces should be finished at right angles to the center axis and they should be sufficiently rigid.
- To avoid elastic deformation, the thrust washer AS must be seated uniformly on its mating surface. A small warp in an AS washer will be corrected automatically when an axial load is applied.
- Thrust Roller Bearings are combinations of a copper alloy component and cylindrical rollers. When handling the AZK itself, care should be taken to prevent deformations, blemishes, etc.
